

The Star Chaserz Company has developed the "Astro Lift" to enable amateur astronomers to take their passion to new heights and to remote dark skies. By making a few modifications to your vehicle and adding the "Astro Lift", we can convert your existing or new SUV or Pickup into a mobile observatory. We at Star Chaserz can do this for you or instruct you on doing it yourself. The three basic ingredients for a mobile observatory are: a suitable vehicle, any of the Schmidt Cassegrain telescopes, and an "Astro Lift". The convenience of the "Astro Lift" will allow you to keep your scope set up and ready for use. Light pollution will no longer keep you and your family from enjoying the night skies!
